POWDER FLAVOUR

Powder flavours are in different forms, which include spray-dried form, granulated form, and dispersed form. The flavour form used in food depends on its application in a food product. For example, in beverages, the flavour is in liquid form, as they can easily mix in the beverage matrix and remain more stable throughout the process. However, for applications like Instant mixes, Bakery products, Electrolytes in pharmaceuticals, powder flavours is more convenient to use

SEASONINGS (Ready Foam)
